

### **LISTING OF CLAIMS**

The listing of claims will replace all prior versions, and listings, of all claims as pending in the application.

**Claim 1 (Currently Amended):** A circuit breaker comprising:

a main circuit formed by a power source-side terminal member, a fixed contact connected to said power source-side terminal member, a moving contact disposed in opposed relation to said fixed contact, a moving contact support member having said moving contact held ~~on~~at one end thereof, a coil operatively connected to said moving contact, and a load-side terminal member connected to said coil;

an opening/closing mechanism including a toggle mechanism ~~for~~operable to rotate said moving contact support member so as to bring said moving contact held at one end of said moving contact support member into and out of contact with said fixed contact, when an excess current flows through said coil, and a fixed frame provided on a yoke of said coil to serve as a support base; and

a trip lever of a disengaging device, mounted on the yoke of ~~the~~said coil in the disengaging device, and being separated from said fixed frame of the opening/closing mechanism.

**Claim 2 (Previously Presented):** A circuit breaker according to claim 1, wherein said fixed frame, serving as a support base for said toggle mechanism, and said yoke are held by a case, and are disposed at different positions, respectively, such that an impact force, generated when said moving contact is in

500.39462X00

contact with said fixed contact by said toggle mechanism, is transmitted through the case to prevent occurrence of a mistrip.

**Claim 3 (Previously Presented):** A circuit breaker according to claim 2, in which said fixed frame is supported at two portions thereof on said case.
